Renato Chaves Nunes | Software Engineer

São Paulo, Brasil | +55 13 99205-7909 | renatochaves.dev@gmail.com | linkedin | Github | Portifolio

Summary

Full Stack Developer with a strong foundation in TypeScript, Next.js, Node.js. Experience in modernizing legacy architectures, optimizing server performance, and leading small development teams. Passionate about tech and software development, with a focus on scalable infrastructure using Docker and Cloud Linux environments, and also doing game development as a hobby.

EXPERIENCE

Orion Marítima, Santos-SP, Brasil — 09/2024 - Present

Software Engineer — **Tech Stack:** Next.js, Typescript, Golang, Python, PostgreSQL, Docker

- **System Architecture & Refactoring:** Spearheaded the modernization of a legacy monolithic system by migrating it to a TypeScript architecture, significantly improving system stability, maintainability, and functionality. Allowing for automation and optimization of previously manual tasks.
- **Infrastructure & Cost Optimization:** Identified and resolved critical server performance bottlenecks. Optimized Node.js code and Docker container configurations, reducing server RAM consumption by 50% and eliminating the need for costly hardware upgrades.
- **Technical Leadership:** Acted as the lead developer in a 2-person team. Mentored a junior developer, established code quality standards, and oversaw the end-to-end delivery of internal projects.
- **Full-Stack Development:** Architected and developed systems from scratch using Node.js and TypeScript, and designed and implemented scalable backend services in Golang using Domain-Driven Design (DDD) for optimal code maintainability and performance.
- **DevOps & Server Management:** DevOps & Server Management: Managed production environments using Ubuntu Server, Nginx (reverse proxy), and PM2. Configured Cloudflare DNS and CNAME records to route custom subdomains, ensuring high availability and secure delivery for all web applications.

Projects

Mobile Application — **Tech Stack:** React Native, TypeScript, Python - Link to Project

Bitewise (AI-Powered Mobile Application)

- Developed a cross-platform mobile application using React Native and TypeScript designed for automated nutritional tracking.
- Integrated a custom-trained YOLOv9 AI model (via Python backend) to automatically recognize food items from user photos and calculate approximate nutritional value.
- Implemented features for historical tracking, goal setting, and data visualization, delivering a seamless and user-friendly experience from the UI down to the machine learning pipeline.

EDUCATION

Unip - [Santos - SP, Brasil] — Graduated - 12/2025

Bachelor's in Computer Science

SKILLS

- **Tech Stack:** TypeScript, JavaScript, Python, SQL.
- **Frontend & Mobile:** Next.js, React Native, NativeWind, Figma (UI/UX Design).
- **Backend:** Node.js, Golang, Python.
- **DevOps & Infrastructure:** Docker, Ubuntu Server, Nginx, PM2,Portainer, Git/GitHub.
- **Soft Skills:** C1 English proficiency, Native Brazilian Portuguese Proficiency.
